Cover Letter

Dear Hiring Manager,

I am a Backend Engineer with 3.6+ years of experience building scalable fintech and banking applications using Java, Kotlin, Python, Spring Boot, Microservices, Docker, Kubernetes, and AWS.

Currently, I am working as a Senior Software Engineer, where I develop backend systems and AI-powered automation solutions. I recently built an AI-based Customer Email Intelligence System that reads customer emails, identifies issues using OpenAI and Azure AI, and generates automated responses.

I have also worked on cross-border payment systems handling thousands of daily transactions with high-performance APIs and real-time processing.

Additionally, I developed 20+ REST APIs for international remittance and investment platforms integrated with fintech applications and services.

My key strengths include:

- Java, Python
- Spring Boot & FastAPI
- Microservices & Distributed Systems
- Kafka, Redis, PostgreSQL, MySQL
- Docker, Kubernetes, AWS
- AI, OpenAI API, LLM Integration

I enjoy solving real-world engineering problems and building reliable, scalable systems. I would be excited to contribute my backend and AI development experience to your team.

Thank you for your time and consideration.

Sincerely,
Saood Alam
